

Katun 13 Ahau Komunt uady 260 Tz'uc

Thompson p. 151

"I am inclined to think that the period of 360 days was chosen because the Maya derived a formal year which would invariably start with Imix and end with Ahau. To fulfil that condition, 360 days was the logical choice..."

Fig. 18 Mac (13th ninal) variants
Combining Imix/Ahau (260) zotat.
(infix)

p. 136
13-Head variant: Imix number (Fig. 28/15)
en fait: Mam en forma de danta Tz'uc ch'ac
indication phallique (I ch'ul k'ab' p. 16)
Fig. 28/15: cabeza "head ch'ac" en cuerpo serpiente. Un sangre serp. et tapir
masa de moiz para hacer la torte
w/hily flower as in other cases relat. fertility water
Tz'uc ch'ac/serpiente/Serpent X

p. 234, Dodson 51-58 (= 46 x 260)
Table showing 405 lunations = 11,960
if " are plotted on a 520 days/wheel (i.e. 2 x 260)
the possible eclipse date fall in 3 groups separated at distances of 173, 31 days. This is so because an eclipse must occur within approx. 18 days of the node, and the moon's path and that of the sun, cross every 173.21 days.
13 11 8 5 2 3 1 5 10 8 5
260 = 9 lunations
♀ fertile 405 lunations?
400 months, pubert./menop.
400 yrs: sun, eclipse
